

# Retrofit of Alabama Power Company Chimney with FRP

Barry Plant, Bucks, AL

12x74 ft.  
concrete section  
to be cut and  
removed for  
accomodation  
of SCR

Concrete has been removed in anticipation of placing duct work.

- 12 ft. wide area around the opening strengthened with CFRP
- 1/8 inch thick engineered CFRP replaces the following rebars:  
#8 at 12 inch vertically &  
#4 at 12 inch horizontally
- Only 5000 pounds of CFRP is required to replace the same strength provided by 100,000+ pounds of steel or concrete

# Restoration of a Deteriorated Reinforced Concrete Chimney with FRP

TengizChevroil, Tengiz, Republic of Kazakhstan

Significant decay and corrosion of concrete near the top of chimney

Preparation of surface

Mixing resin

Saturating fabric

Transporting materials

Application of tack coat

Installation of fabric

Installation of fabric

Restored chimney after repairs and painting
