TO WHOM IT MAY CONCERN

Michael Slater become known to me some ten years ago March 2002 when he arrived in Australia from South Africa and started a company here in Brisbane called "Aerify Group"– specializing in structural rehabilitation which was later sold and absorbed into Transpacific. Transpacific four years later decided to focus on their core activities and Michael started Building Solutions Brisbane Pty Ltd specializing in structural problems.

Michael studied in South Africa and is a graduate Civil Technologist with a master's diploma in structural engineering. He has a special interest in concrete with an emphasis on structural problems and is also a member of the Concrete Institute.

Michael and his team have been able to assist me on site with the ground work for detailed investigations and have the necessary specialist plant, labour and equipment. He and his company have prepared a budget and eventually when the project eventuates carried out the work in a professional manner.

Michael and his team have been able to complete major repair projects on time, and within budget and perform the work safely.

Significant projects that we were involved in are, University of Queensland "J D Story Building" and other buildings on campus, Sewer pump stations for Brisbane City council and Morton Bay, Brisbane River walkway, the Grain silos at Pinkenba and the cooling water tower at the BP oil refinery.

I would have no hesitation in recommending Michael and Building Solutions Brisbane Pty Ltd., as a contractor for both minor or major construction and repair projects.
